

Silos and silo-systems

Application

The silos (systems) are designed for storage of a variety of dry, free flowing bulk products.

Benefits

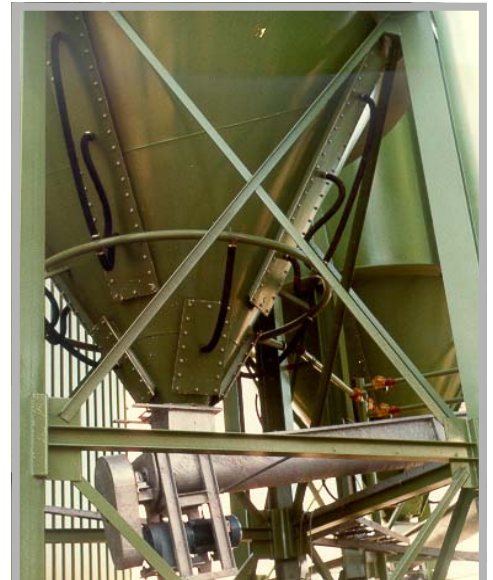

- Less friction to the walls.
- Less chance to bridge building.
- Gentle material handling.
- Complete discharging of products.
- Efficient and simply designed.
- Custom-built to suit individual requirements.

Optional extras

- Stainless steel construction.
- Aeration panels.
- Activators in hopper.

Management System

Smooth-wall silos and silo systems

Application

We designed the smooth-wall silos and silo systems to store different dry and bulk products with medium or hard flowing characteristics.

Characteristics

- Bolt-free mounting.
- No danger of bridging.
- Smooth material handling.
- Total discharge of the product.
- Rounded inner corners of the silos.
- It can be custom-made according to individual requirements.

Optional extras

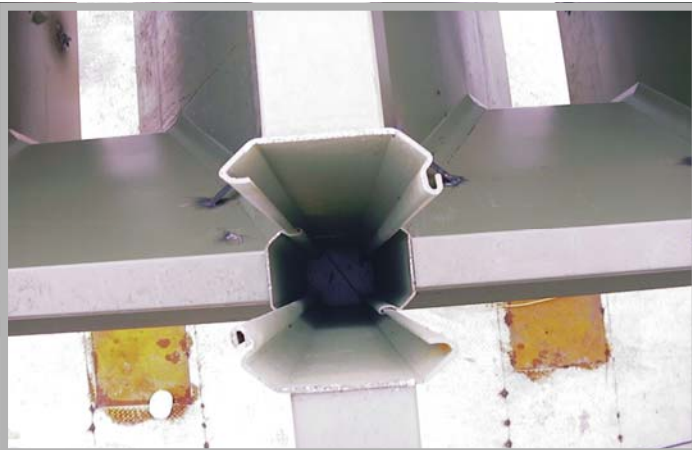

- Corrosion-proof steel construction.
- Aerating panels.
- Agitator in the lower cones.
- Anti-segregation filling pipe.

Benefits

- Bulkload-out silos and internal silos→pile planking system.
- Smooth silo walls – clean, hygienic.
- Silos are dedicated to materials and it's flow characteristics.
- Integrated into bld, low investment cost.

Mounting totally smooth-wall silo block without bolts.

Forming a column joint before concrete filling.
